dimensions

- For optimum performance, all gates must be on quality hinges. Gates must operate smoothly & evenly.
- Wind loading can affect gate operation (especially clad gates).
- XP Gate Driven Systems will drive a variety of gate sizes and weights. This is dependent on the quality of hinges and the force required at 1 metre from the hinge point to open and close the gate. 15kg is a recommended maximum for gates opening in ('Pull') and 7.5 kg for gates opening out ('Push').
- Suitable for rising hinge gates. ©
